Brainstorm & Idea Prioritization Template

The project focuses on importing spreadsheet data into ServiceNow using Import Sets and Transform Maps. The brainstorming process identifies the required data-import flow, possible mapping approaches, validation needs, and a practical way to move spreadsheet records into the target table accurately.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement: Manual entry of multiple records into ServiceNow can take time and may introduce data-entry errors. A spreadsheet-based import process is needed to bring structured data into ServiceNow efficiently and map the incoming fields to the appropriate target-table fields.

Requirement	Selected Approach
Source data	Spreadsheet containing the records to be imported
Import method	Import Set / spreadsheet import
Data mapping	Transform Map between source and target fields
Validation	Check imported records and field values after transformation

Step-2: Brainstorm, Idea Listing and Grouping

Idea	Description	Group
1. Spreadsheet Import	Use spreadsheet data as the source for importing multiple records.	Data Source
2. Transform Map	Map source spreadsheet fields to the corresponding target-table fields.	Data Transformation
3. Field Validation	Verify that required fields and imported values are correct.	Data Quality
4. Import Verification	Check the target table after the import to confirm successful record creation/update.	Testing

Step-3: Idea Prioritization

Priority	Idea / Activity	Reason
1	Transform Map field mapping	Core step for transferring source data to the correct target fields.
2	Spreadsheet / Import Set	Provides the structured source data for the import process.
3	Validation	Helps identify missing or incorrect values before final verification.
4	Post-import verification	Confirms that the records and mapped values appear correctly in the target table.

Project Outcome

The selected approach uses a spreadsheet as the source and a Transform Map to control how the imported data is transferred into the ServiceNow target table. The process emphasizes correct field mapping, data validation, and verification of the resulting records.

Project Topic: Import Data using Transform Maps (Spreadsheet)

Platform: ServiceNow Developer
